

MUHAMMAD MUSTAFA

DEVOPS ENGINEER

☎ +923345249994

✉ mmshah953@gmail.com

📍 Islamabad, Pakistan

TECHNICAL SKILLS

- **Cloud Platforms:** AWS (EC2, ECS Fargate, ECR, VPC, RDS, ALB, ASG, Secrets Manager, CloudWatch)
- **Infrastructure as Code (IaC):** Terraform, AWS CloudFormation
- **Languages and Tools:** Bash, Python, JavaScript, Git, GitHub, GitHub Actions, Docker, MySQL

PROFESSIONAL EXPERIENCE

DevOps Engineer Intern, Eurus Technologies Jan 2025 - June 2025

- Developed hands-on proficiency in DevOps scripting by building foundational automation tools and projects using Bash and Python.
- Gained deep practical knowledge of core AWS services (VPC, Subnets, Security Groups, NACL, EC2, and RDS), transitioning from manual UI configuration to advanced automated architecture.
- Designed and deployed scalable, automated cloud environments and auto-scaling groups using AWS CloudFormation and Terraform.
- Initiated the integration of Docker into the deployment pipeline, learning basic containerization concepts to optimize application portability.

FullStack Developer Intern, PIA July 2025 - Sep 2025

- Developing in-house modules for PIA's AIMS system using React, .NET Core, and MySQL, contributing to crew operations management.
- Implemented scheduling logic and optimized UI workflows for better usability.
- Collaborated with the senior IT Manager and the previous user of the existing system to align modules with PIA's operational requirements.

PROJECTS

AWS EC2 Auto-Scaling with CloudWatch & Terraform

- Provisioned a highly available AWS architecture using modular Terraform, featuring a VPC with isolated subnets, an Application Load Balancer (ALB), and an RDS MySQL database.
- Automated resilient WordPress deployments on EC2 via user-data bootstrapping, integrating Secrets Manager for secure credential storage and CloudWatch alarms for dynamic auto-scaling.

Multi-Environment AWS ECS Fargate Deployment

- Built multi-environment Terraform pipelines to deploy a Dockerized Flask app on AWS ECS Fargate; integrated ALB, RDS, and CloudWatch, leveraging Fargate Spot to optimize costs.
- Built secure GitHub Actions CI/CD pipelines deploying to ECS via ECR; enforced VPC isolation and least-privilege IAM, cutting deployment times to <10 minutes.

Auto-Scaling WordPress on AWS — CloudFormation Nested Stacks

- Automated AWS infrastructure provisioning for a WordPress application using nested CloudFormation templates (VPC, RDS, ALB, ASG).
- Implemented dynamic auto-scaling via CloudWatch target tracking policies, optimizing instance provisioning and health checks.

EDUCATION

Bachelor of Science in Computer Science

Sep 2022 - June 2026

Air University, Islamabad
